

Common points are collecting paper, metal, plastic, batteries and caps.

The good practices are to gather separately waste for charity or send the waste at the recycling centers.

In Romania we need to have a selective collection of the waste, to recycle the paper, glass, plastic and metal.

In France we have composter for the waste and the selective sorting for a better environment.

In Turkey we must place garbage cans in the classrooms.

In Portugal we need of requalification of the paper in classrooms. Increase the separation of waste at schools: paper, packaging, glass, caps, batteries. Promote recycling to the community.

For the next school year in Bulgaria we will buy recycle bins for separate collecting of the waste.

Macedonia – to keep our environment clean and safe, we need to throw the garbage only in trash cans. The trash cans need to be in a lot of places and they should be emptied more often.
