

Water is life/Vodata e jivot /Apa e viata/l'eau c'est la vie/Vodata e zhivot/Agua e vida/Su hayattir

Our common topic is WATER.

Our presentation is about saving water and the ways to do that. We discussed this in our group and came to a conclusion that we all have similar ways of saving water.

Our school participated this spring in a program called "The Drop of water ", that took place at the water plant of the city, in which they have saw the workshop for testing and providing water of good quality in the city and it's surroundings. Here, the specialists showed us how to reduce the housework consumption of water

Also we have to protect the water from our rivers from pollution, to know better the consumption of water at the school and to change behavior in relation to water consumption at school and the students' home. We have to use water rationally in school buildings and at home. We have to reduce water in school buildings by 10% in the period from September 1st to June 10th compared with the previous school year.

On an approved European project "Development, renovation and modernization of the Urban Environment in Targovishte" under operational program "Regions in growth" (2016-2020).

Sanitation was carried out and replacement of the heating installation, repair of petroleum particles.

The problem is that in kitchen, the toilets taps are not electronic so we have waste of water.
